**Green Fuel Technologies Launches “No Money Down, 12 months no payments”  
Lease Program  
for Arizona Homeowners to Go Solar**

**(Phoenix)**- Green Fuel Technologies, one of the Valley’s leading alternative energy companies, is helping Valley homeowners get solar power with a new lease program that requires no money down and reduces electric costs by generating more savings than the cost of the lease.

The introductory offer includes zero down and no payments for 12 months, saving customers an additional \$2,133.24 in the first year. Now you can get Green Fuel quality and a low cost lease together.

“The new financing option is the first step to making solar energy affordable and more appealing to all Arizona homeowners,” said John Casey, CEO of Green Fuel Technologies. “Solar power is an investment in their home and the environment.”

Residents who take advantage solar energy can save 10 to 15 percent on their utility bills. For example, a homeowner whose monthly utility bill is \$300 will pay \$177.77 a month for a 20 year solar lease, saving roughly \$75.59 a month which will ultimately save the consumer \$900 after the first year of investment.

Incentives for choosing solar technologies from power companies are shrinking over time. Energy rates increase an average of ten percent per year, so installing solar energy now will create savings in the long run.

“Since solar power is a clean, silent, reliable energy source and requires very little maintenance, the time for consumers to invest is now,” said Casey. “Do it while you can, not when you have to.”
