Green Fuel Technologies, Offers Home Energy Audits to Beat the Heat
Complete Home Energy Audit Prepares Valley Homeowners for Summer

(Phoenix)- Green Fuel Technologies Inc., www.greenfuelsolar.com, one of the Valley's leading alternative energy companies, now offers a brand-new certified home energy service that will help Arizona homeowners save money and prepare for the summer heat.

Green Fuel's "Complete Whole Home Energy Audit" provides homeowners with a comprehensive home assessment that evaluates energy inefficiencies in the home including water damage, mold damage and insufficient insulation. Each audit is conducted by an on-staff Building Performance Institute (BPI) certified home performance analyst who will identify energy wastes and offer homeowners the most efficient upgrades to prevent cool air from escaping the home. During the hot summer months, an audit can identify ways to prevent air conditioning from leaving the home, and Green Fuel can help make the needed changes which will result in lower electricity bills.

The Green Fuel "Complete Whole Home Energy Audit" is certified by Arizona Home Performance with ENERGY STAR. Home check ups, with complete testing and inspections, normally cost \$299-\$750 for an average size home, but APS customers qualify for a \$200 rebate, making their cost for a Green Fuel "Complete Whole Home Energy Audit" only \$99. APS and SRP also offer rebates on most weatherization and energy efficiency upgrades, resulting in up to 75 percent in home improvement incentives. Green Fuel also provides upgrades to the home energy audits including thermal imaging and duct blast testing.

"Homes need tune-ups to run at their maximum efficiency," said John Casey, CEO of Green Fuel Technologies. "Easy affordable upgrades can improve the overall health and performance of your home, keeping you cool during the summer months, and your home more efficient year round."

Some of the most common solutions include upgrading cooling systems, sealing ducts, sealing air leaks, upgrading lighting and appliances and repairing or adding insulation. A home energy audit can identify ways to save money on energy bills, increase comfort in every room, improve health and safety, increase the durability and value of the home and improve environmental quality for the community.
